

SERVER SYSTEM WITH MULTIPLE MANAGEMENT USER INTERFACES

Abstract of the Disclosure

A cPCI server system includes a plurality of printed circuit assemblies, including
5 at least one host processor card. A server management card is coupled to the plurality of
printed circuit assemblies for monitoring and managing operation of the server system.

The server management card receives and stores status information from the plurality of
printed circuit assemblies. The server management card includes a plurality of interfaces
for configuring the server management card and accessing the stored status information
10 from the server management card.
